

Rohit Pandey

Mumbai, India

+91-9702618251 | rohitpdev10@gmail.com | Portfolio | GitHub | LinkedIn

Profile

Computer Engineering student interested in full-stack web development, backend systems, AI-assisted applications, and problem solving. Experienced with the MERN stack, REST APIs, MVC architecture, MongoDB, authentication, LaTeX generation, and LLM integrations. Actively strengthening Data Structures and Algorithms through competitive programming.

Education

Dwarkadas J. Sanghvi College of Engineering

Mumbai, India

Bachelor of Technology (B.Tech.) in Computer Engineering

2025 – 2029

CGPA: 9.45

Projects

BrandLoom – AI Brand Strategy & Marketing Platform

MERN Stack, Tailwind CSS, LLM

Live Website | GitHub

- Built an adaptive Socratic brand strategy platform that interviews founders to derive positioning, tone, customer insights, and brand identity before generating brand assets.
- Architected a dual-LLM pipeline using Groq Llama 3.3 70B as the primary model and Gemini as a fallback, improving resilience against provider outages and rate limits.
- Implemented MongoDB Atlas with automatic local JSON fallback so the application can gracefully handle database unavailability.
- Developed a prompt-engineering layer that uses founder responses to personalize generated brand kits instead of producing generic templated output.
- Shipped a React 18 + Vite + Tailwind CSS frontend with a Node.js/Express backend API within a 24-hour hackathon.

JakeResume – ATS LaTeX Resume Platform

MERN Stack, Tailwind CSS, LaTeX

Live Website | GitHub

- Developed a full-stack resume platform that converts structured profile data into ATS-friendly LaTeX resumes with automated formatting.
- Built a client-side reactive LaTeX generator with bullet-level controls and deterministic sanitization of reserved LaTeX characters and macros.
- Designed a 3-tier compilation architecture supporting an Express proxy, remote pdflatex compilation, client-side .tex generation, and direct Overleaf dispatch.
- Implemented an AI ingestion pipeline to sanitize unstructured LLM extraction payloads and normalize nested resume content.
- Added a real-time 48-line page-budget estimator to prevent multi-page layouts and maintain one-page resume output.

Competitive Programming

- Solved **334+** **algorithmic problems** across LeetCode, CodeChef, Codeforces, and AtCoder, covering Data Structures, Algorithms, and competitive programming.
- Participated in **37 coding contests** across multiple competitive programming platforms.
- **LeetCode: 1500** **CodeChef: 1406** (Max: 1426) **Codeforces: 1109** (Max: 1199)
- **AtCoder: 34** (Max: 34) **CodeChef DSA: 1508** (Max: 1508)

Technical Skills

Languages: JavaScript, C++, C, Java, Python

Frontend: HTML5, CSS3, Tailwind CSS, React.js, Vite

Backend: Node.js, Express.js, REST APIs, MongoDB, MySQL

Tools: Git, GitHub, Postman, VS Code, Antigravity
